Git repository Link : <https://github.com/IT24101972/IT24101972-WMT-Lab-test.git>

- locally running existing project

- locally running updated project

- Backend live url : <https://it24101972-wmt-lab-test.onrender.com>
- Frontend live url : <https://it24101972myapp.netlify.app/>

Notes :

Added a new field call Warranty period into the existing project.

First I uploaded both backend and frontend into same git hub repository.

I used MongoDB for database . Render for backend deployment and Netlify for frontend deployment.

Render backend

- - press web services
- - root directory = backend
- - build command = npm install
- - start command = npm start
- - environment variable = backend env file

Netlify frontend

- .env.example = VITE_API_URL = render backend url
- base directory = frontend
- build command =rm -rf node_modules package-lock. Son && npm install && npm run build
- publish directory = frontend/dist
